Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

Content

Chapter 1 Introduction.

- 1.1 Proteins. 10
- 1.2 The structure of peptides in solution. 10
- 1.3 Experimental techniques to determine peptide structure and their uncertainties. 11
- 1.4 Current understanding of the mechanism of protein/peptide folding. 15
- 1.5 Methods to model peptide folding. 17
- 1.6 Molecular dynamics simulation techniques. 18
- 1.7 Simulation of peptide and protein folding. 21
- 1.8 Environmental effects on peptide folding. 22

Chapter 2 The effect of force field on the structure and dynamic properties of small peptides.

- 2.1 Introduction. 32
- 2.2 Systems. 33
- 2.3 Simulation parameters. 34
- 2.4 Results and Discussion. 37
- 2.5 Conclusions. 61

Chapter 3 Estimating the folding rates of small peptides: Comparing simulation to experiment.

- 3.1 Introduction. 66
- 3.2 Material and Methods. 67
- 3.3 Results and Discussion. 70
- 3.4 Conclusions. 75

Chapter 4 Alternative approaches to promote protein folding.

- 4.1 Introduction. 80
- 4.2 Systems. 81
- 4.3 Simulation parameters. 83
- 4.4 Results and Discussion. 84
- 4.5 Conclusions. 98

Chapter 5 The effect of polyethylene glycol (PEG) spacers on the conformational properties of small peptides: a molecular dynamics study.

5.1 Introduction.	102
5.2 Methodology.	103
5.3 Results and Discussion.	109
5.4 Conclusions.	117

Chapter 6 The interfacial structure of self-assembled switchable peptide surfactants.

6.1 Introduction.	122
6.2 Methodology.	123
6.3 Results and Discussion.	129
6.4 Conclusions.	144

Conclusions and Perspectives. 149

Summary. 155

Acknowledgement. 161
